

# **Courier Management System**

Simply account the information related to delivery  
of the Courier

# WELCOME

“

Me Awon, I am studying Computer Science at GC University Lahore. I am passionate about new technologies and tries to solve various problems.

Courier management system is fast and responsive. This system has full record of pervious couriers with detail. Moreover, this system is digital response system.

# Problem

Create a Courier Management System in Java Project is to provide appropriate technology to help manager manage information.

- The main aim of this project is to computerize the maintenance of courier management.
- The main purpose of this system is to connect all branches to center database so the everywhere information is same. This system increases the efficiency and increases the customer satisfaction level.

# Solutions

## **SENDER**

Information of sender such that: Name, CNIC, Address, Phone Number

## **RECEIVER**

Receiver information such that: Name, CNIC, Address, Phone Number

## **COURIER INFORMATION**

Type of courier, Weight of courier, ID of the courier, Security level

## **SENDER DEPARTMENT**

Transporter Name, ID, Phone Number, Address, Courier documents

## **RECEIVER DEPARTMENT**

Collector Name, ID, Phone Number, Address, Courier Documents

## **JAVA LANGUAGE**

Courier Management system project is implemented in Java Platform. We use java because it is one of the mostly used software all over the world

## **DELIVERY INFORMATION**

Take the address of receiver delivery person take the confirmation from the receiver. Then he give the parcel to the receiver
